Saseno Island, at the entrance of the Valona bay, is an important strategic	
point. The Soviets have converted it into a most modern coastal defense base.	ìo
2. Since 1932, when the Italians began to fortify this island and its port of Sant Nights, work has been continued by the Germans and now by the Soviets.	
2. Since 1932, when the Italians began to fortify this island and its port of Sant Names, work has been continued by the Germans and now by the Soviets. 3. The Germans built three underground galleries where they intended to base	ınt

- 5. The locations of these underground galleries are:
 - (a) Gallery A is a little before the very cape of Karaburna √literal translation/.
 - (b) Gallery B is on the northern side of the island.
 - (c) Gallery C is on the southern side of the island.

On the eastern side of the island, above ground, are large cisterns with drinking water.

- 6. During 1949 the Soviets completed on the island a modern site for launching rocket missiles The Soviets have also completed construction of modern fortifications for movable and stationery artillery which are 50X1-HUM manned by one regiment of Albanian marines.
- 7. The island is well defended against air attack by anti aircraft batteries located both on the island and on the neighboring mainland.
- 8. The port of Sant Nikolas is the last word of modern Soviet port construction. One-half mile south of the port are open /above ground/ submarine bases which the Soviets plan to use if they need more submarines than the underground galleries can accomodate. These bases have their own munitions, magazines, and fuel storage tanks.
